# GitHub Push Instructions

## Changes Committed Locally ✅

The following changes have been committed to your local repository:

- Enhanced error suppression for iframe resources
- Production release v1.0 improvements

## To Push to GitHub:

### Option 1: Using Personal Access Token (Recommended)

1. Generate a token at: https://github.com/settings/tokens
2. Run these commands:

   ```bash
   cd /home/ubuntu/college_algebra_website
   git push https://YOUR_USERNAME:YOUR_TOKEN@github.com/mltmacster/college_algebra_website.git master
   ```

### Option 2: Configure Git Credential Helper

```
cd /home/ubuntu/college_algebra_website
git config credential.helper store
git push origin master
# Enter your GitHub username and personal access token when prompted
```

### Option 3: Using SSH (If SSH key is configured)

```
cd /home/ubuntu/college_algebra_website
git remote set-url origin git@github.com:mltmacster/college_algebra_website.git
git push origin master
```
